Exam : **2V0-91.22**

Title : VMware Carbon Black Cloud Professional

Version : DEMO

1.What is the primary function of a hypervisor in virtualization technology?
A. To support multiple operating systems on a single physical server
B. To provide network security for virtual machines
C. To automate the deployment of virtual machines
D. To monitor resource usage in a virtual environment
Answer: A

2.Which type of virtualization technology allows multiple virtual machines to share the same underlying operating system kernel?
A. Full virtualization
B. Paravirtualization
C. Hardware-assisted virtualization
D. Containers
Answer: D

3.What is a common benefit of using software-defined networking (SDN) in virtualized environments?
A. Improved network performance
B. Simplified network management
C. Increased hardware requirements
D. Decreased scalability
Answer: B

4.In a virtualized environment, what is the purpose of a virtual switch?
A. To connect virtual machines to physical networks
B. To allocate CPU resources to virtual machines
C. To manage storage resources for virtual machines
D. To secure communication between virtual machines
Answer: A

5.What is the concept of server consolidation in virtualization technology?
A. Increasing the number of physical servers to improve performance
B. Reducing the number of physical servers by running multiple virtual machines on a single server
C. Increasing the memory capacity of virtual machines to prevent resource contention
D. Automating the deployment of virtual machines to optimize server utilization
Answer: B
