Exam : **3V0-22.25**

Title : Advanced VMware Cloud Foundation 9.0 Operation

Version : DEMO

1.A Security Architect is designing the identity management strategy for a new VCF Operations deployment. The organization enforces a policy that "No application-specific local user accounts are allowed for day-to-day administration."
Which configuration steps must be performed to meet this policy?
A. Configure an **Identity Source** (LDAP/Active Directory) within the VCF Identity Broker (or directly in VCF Operations depending on version), import the relevant AD User Groups, and assign VCF Operations Roles to those imported Groups.
B. Enable the "Local Guest" account and rename it to match the administrator's ID.
C. Use the "SAML Local" feature to federate VCF Operations with itself.
D. Manually recreate every AD user in the VCF Operations local database with a matching password.
Answer: A

2.A Cloud Admin is reviewing the "Domain Summary" dashboard in VCF Operations to verify the resource composition of a newly deployed VDI Workload Domain (sfo-w02).
VCF Operations - Inventory List: sfo-w02

Resource Name	Resource Kind	Adapter Instance
sfo-w02-vc01.corp.local	vCenter Server	vCenter Adapter
sfo-w02-cl01	Cluster Compute	vCenter Adapter
sfo-w02-nsx01-vip	NSX Manager	NSX Adapter
sfo-m01-sddc01	SDDC Manager	SDDC Adapter
host-10.10.20.1	Host System	vCenter Adapter

Which item in this list technically belongs to the *Management Domain* infrastructure but is visible here due to its role in managing the VDI domain's lifecycle?
A. sfo-w02-cl01
B. sfo-m01-sddc01
C. sfo-w02-vc01.corp.local
D. sfo-w02-nsx01-vip
Answer: B

3.A deployment plan calls for VCF Operations to be integrated with "Azure Active Directory" (Entra ID) via SAML 2.0, rather than legacy LDAP.
Which VCF component is required to act as the Service Provider (SP) intermediary to facilitate this modern authentication flow?
A. The **VCF Identity Broker** (or vIDM in older versions).
B. The VCF Operations "LDAP Import" plugin.
C. The vCenter Server Platform Services Controller (PSC).
D. The SDDC Manager "Repository" service.
Answer: A

4.In the context of the VMware Cloud Foundation (VCF) software-defined data center, which statement best describes the primary architectural role of VCF Operations compared to SDDC Manager?
A. VCF Operations acts as the central identity provider, managing Single Sign-On (SSO) tokens for all VCF components.

B. VCF Operations serves as the centralized platform for intelligent operations management, providing visibility into performance, capacity, cost, and compliance across the entire stack.
C. VCF Operations handles the lifecycle management (patching, upgrading) of the physical hardware and ESXi hosts.
D. VCF Operations is the primary automation engine responsible for provisioning new Workload Domains and deploying vCenter Server instances.
Answer: B

5.A VCF Operator needs to isolate logs coming specifically from the "Production" environment. All production VMs are configured with a VCF Operations for Logs Agent tag: environment=production. What is the most precise way to configure this filter in Interactive Analytics?
A. Type "production" in the main search bar.
B. Sort the logs by hostname.
C. Use a regex *.production.*.
D. **Add a Filter**: Select the field **environment**, set the operator to **equals** (or contains), and enter the value **production**.
Answer: D
