**Exam : HP2-Z07**

**Title : Advanced Enterprise  
Networking**

**Version : DEMO**

1.What is the minimum number of switch fabrics necessary to enable basic functioning of an S12508 switch?

- A.4
- B.6
- C.8
- D.12

**Answer: B**

2.Which types of 10GbE interfaces are supported by the S12500E switches? (Select two.)

- A. XFP
- B. CX4
- C. SFP
- D. X2
- E. SFP+

**Answer: AE**

3.What are the advantages of using SFP+ transceivers instead of X2 transceivers? (Select two.)

- A. larger buffer
- B. higher throughput
- C. higher port density
- D. lower power usage
- E. more cable options

**Answer:C,D**

4.What is the maximum number of I/O modules supported by a member of the S9500E family?

- A. 10
- B. 12
- C. 16
- D. 18

**Answer:B**

5.Match each Open Application Architecture (OAA) mode with the correct description.

mirror, host, redirect, pass-through

Descriptions

|                                                                                     |                                                                                                                                             |
|-------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
|  | The router sends copies of specific packets to the independent service system for processing and analysis. Packets are forwarded as usual.  |
|  | The independent service system has its own IP address and behaves as if it were a stub of the network.                                      |
|  | The router forwards specific packets directly to the independent service system, which determines if they should be forwarded or discarded. |
|  | The independent service records and analyzes all traffic and sometimes modifies packets to fulfill a function.                              |

6.Match each H3C switch model with the correct positioning.

| Switch models | Positioning                                                     |
|---------------|-----------------------------------------------------------------|
| (place here)  | access layer                                                    |
| (place here)  | building or department enterprise core, data center top-of-rack |
| (place here)  | high-density aggregation or access layers                       |

7.Which switch provides the highest 10GbE port density in a 1RU platform?

- A. S5800-60C-PWR
- B. S5800 Gigabit Stackable
- C. S5820X-28S
- D. S7500E

**Answer:C**

8.A customer requires full wire speed performance from an S12508 switch provisioned with 48-port gigabit LPUs in all slots. How many switch fabrics are necessary to fulfill this requirement?

- A. 4
- B. 6
- C. 8
- D. 12

**Answer:C**

9.Match each H3C switch model with its description.

| S7500E        | S12500                                                                                | S9500E |
|---------------|---------------------------------------------------------------------------------------|--------|
| Switch models | Descriptions                                                                          |        |
| (place here)  | multi-purpose switch suitable for mid-sized core, distribution, and edge layers       |        |
| (place here)  | designed to support High Speed Computing Applications and large-scale Data Centers    |        |
| (place here)  | well-suited to campus core and distribution layers, as well as mid-sized Data Centers |        |

10.Which software feature is available on the Advanced I/O modules for the 9500E switches, but is not available on the Standard I/O modules?

- A. IRF
- B. BFD
- C. VPLS
- D. MPLS

**Answer:C**
